

SKOBIFIXXs® 30

Prefab chimney shaft (Outer dimension: 150 x200 mm) for condensing technology, defined for buildings class 1-2 (Single family dwellings, fire-resistance class F30)

Order/enquiry form 2021

Description and brief explanation:

The overview diagram (Right) shows the assembled structure of the SKOBIFIXXs® 30 prefab shaft. The shaft comprises the following parts:

- 1 1M interlocking chimney shaft block, containing integral PPs flue D80 including bracing brackets
- 2 Ceiling connection adapter with 100mm air-inlet inspection cap 80/125
- 3 Stack pack, comprising roof terminal, with options of pitched roof tile 25-45°, 5-25°, 35-55° or flat flashing
- 4 SKOBIFIX special adhesive in 3 kg tub
- 5 Support brackets

The interlocking shaft blocks **1** are 1 metre in length. The quantity of shaft parts required is determined by the length of the shaft starting at the ceiling above the heating appliance and extending to the roofing panel (around the shaft length up to the next whole number).

One ceiling connection adapter **2** and one stack pack **3** is required for each chimney shaft. Appropriate option should be selected or flat roof, or pitch of roof, height above roof and colour required.

A 3 kg tub of special adhesive **4** is sufficient to secure approx. 10 off interlocking chimney shaft block joints.

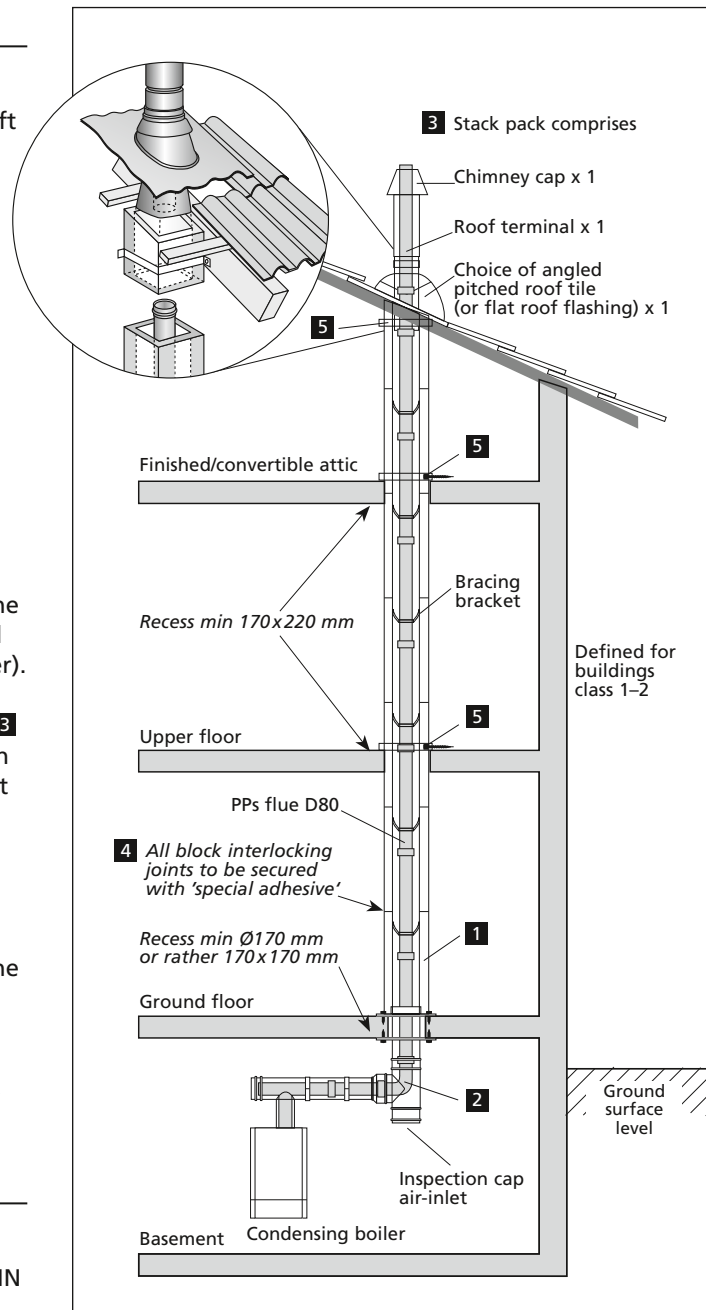

The support brackets **5** must be fixed in position in the area above the ceiling openings (except in the first ceiling above the heating appliance) and to the roof rafters at the uppermost position.

The number of support brackets required corresponds to the number of floors above the heating appliance.

Delivery conditions

The prices are given per unit exclusive of local value-added tax and delivery costs. Non-exchanged EURO DIN pallets will be calculated at 13 EUR. We will deliver to an accessible unloading point. Unloading is not included. The customer must assume responsibility for unloading the goods.
